**Intonation in African Tone Languages** Feb 25 2022 This volume brings together two under-investigated areas of intonation typology. While tone languages make up to 70 percent of the world's languages, only few have been explored for intonation. And even though one third of the world's languages are spoken in Africa, and

most sub-Saharan languages are tone languages, recent collections on tone and intonation typology have almost entirely ignored African languages. This book aims to fill this gap. *Intonation in Text and Discourse* Jan 03 2020 It is clear that a printed text provides the reader with more information than the words alone. This includes punctuation marks, capitalisation,

paragraphs, headings and sub-headings, all of which help the reader to understand how the words are organised into sentences, and sentences are organised into a coherent text. In a spoken text, this typographical information is necessarily absent. So how do readers and speakers provide equivalent information to the listener? *Intonation in Text and Discourse* describes the way in which speech melody, or intonation, is used to signal the structure of spoken texts. It examines the role of intonation in clarifying the relationship between successive utterances, from close cohesive ties ('middles') to major breaks for a new topic ('ends' and 'beginnings'). The book is concerned chiefly with the intonational structuring of read or prepared monologue, but also devotes a chapter to current developments in the analysis of intonation in conversation. It describes not only how intonation is used to organise systematic turn-taking but also how it can signal greater or lesser degrees of co-operativeness. It addresses

finally the complex issue of attitudinal intonation - the elusive 'tone of voice'. The first book on discourse intonation to deal with such a wide variety of naturally-occurring spoken data, *Intonation in Text and Discourse* will be of great interest to students, lecturers and researchers of intonation and all aspects of spoken discourse.

**The Phonology of Tone and Intonation** Nov 05 2022 Publisher Description

Tone of Voice and Mind Aug 22 2021 Tone of Voice and Mind is a synthesis of findings from neurophysiology (how neurons produce subjective feeling), neuropsychology (how the human cerebral hemispheres undertake complementary information-processing), intonation studies (how the emotions are encoded in the tone of voice), and music perception (how human beings hear and feel harmony). The focus is on the psychological characteristics that distinguish us from other primate species. At a neuronal level, we are just another mammalian species, but the functional specialization of the human cerebral hemispheres has resulted in three outstanding, uniquely-human talents: language, tool-usage and music. To understand how the human brain coordinates those behaviors is to understand who we are. (Series B)

**Topic and Focus** Oct 31 2019 During the 2001 Linguistic Summer Institute at University of California, Santa Barbara, a group of linguists gathered at a workshop to discuss the expression and role of topicalization and focus from a variety of perspectives: phonetic, phonological, syntactic, semantic, and pragmatic. The workshop was designed to lay the groundwork for collaborative efforts between linguists devoted to the study of

meaning and linguists engaged in the quantitative study of intonation. This volume contains papers emerging from the Santa Barbara Workshop on Topic and Focus. A wide variety of methodologies and research interests related to topic and focus are represented in the papers. Some works present results of phonetic studies, either acoustic or perceptual, on the expression of topic and/or focus; others examine semantic or pragmatic features of topic and/or focus, while others are concerned with the interface between intonation and meaning. Data from several different languages are represented in the papers, including several languages with relatively little documentation particularly in the venue of topic and focus, e. g. Basque, Chickasaw, Indonesian, Polish, Taiwanese. The broad sample of languages coupled with the wide variety of research topics addressed by the papers promise to enrich our typological understanding of topic and focus phenomena and provide an impetus for further research. The

following paragraphs offer brief summaries of the papers contained in this volume: Gorka Elordieta's paper describes prosodic conditions governing focus in a dialect of Basque with pitch accents.

**Tone in Yongning~Na** Mar 05 2020 Yongning Na, also known as Mosuo, is a Sino-Tibetan language spoken in Southwest China. This book provides a description and analysis of its tone system, progressing from lexical tones towards morphotonology. Tonal changes permeate numerous aspects of the morphosyntax of Yongning Na; they are not the product of a small set of phonological rules, but of a host of rules that are restricted to specific morphosyntactic contexts. Rich morphotonological systems have

been reported in this area of Sino-Tibetan, but book-length descriptions remain few. This study of an endangered language contributes to a better understanding of the diversity of prosodic systems in East Asia. The analysis is based on original fieldwork data (made available online), collected over the course of ten years, commencing in 2006.

English Intonation PB and Audio CD Jan 15 2021

Intonation - the rise and fall of pitch in our voices - plays a crucial role in how we express meaning. This accessible introduction shows students how to recognize and reproduce the intonation patterns of English, providing clear explanations of what they mean and how they are used. It looks in particular at three key

functions of intonation - to express our attitude, to structure our messages to one another, and to focus attention on particular parts of what we are saying. An invaluable guide to how English intonation works, it is complete with extensive exercises, drills and practice material, encouraging students to produce and understand the intonation patterns for themselves. The accompanying CD contains a wealth of spoken examples, clearly demonstrating English intonation in context. Drawing on the perspectives of both language teaching and linguistics, this textbook will be welcomed by both learners of English, and beginning undergraduates in phonetics and linguistics.

The Intonation of Interrogation in Palermo

Italian Jul 29 2019 In Palermo Italian yes-no interrogatives, if the last syllable of a phrase is unstressed, the nuclear pitch contour is rising-falling, whereas if it is stressed, the contour is simply rising. Such context-dependent variation cannot be adequately accounted for within a British-style approach to intonation. By contrast, autosegmental pitch accent studies of intonation, where nuclear pitch configurations are expressed in terms of H(igh) and L(ow) tones, are shown to offer the flexibility necessary to do so. These tones are incorporated into a hierarchical structure in which they have either an accentual or a primarily delimitative function. In the former case, tones are part of a Pitch Accent which has an association to a syllable; in the latter case, tones are associated to nodes representing higher prosodic constituents, either the intermediate phrase or the intonation phrase, and are realised as boundary tones. Building on current analyses, a model is proposed in which tones in the Pitch Accent are

also hierarchically structured, involving two levels: the Supertone and Tone. This extended Pitch Accent structure not only explains apparent inconsistencies in phonetic alignment in Palermo Italian, but also accounts for equivalent consistency in alignment in English. In addition it allows leading tones in Palermo Italian to be treated in a qualitatively different way from leading tones in English. The Palermo Italian interrogative marker consists of a L\*+H Pitch Accent. There is no paradigmatic contrast on the intermediate phrase boundary tone (it is always L) which means that its function is purely delimitative. This tone is only fully realised when a postaccentual syllable is available to carry it; technically, it requires a secondary attachment to a syllable. The absence of the falling part of the L\*+HL (L) configuration in phrases with no postaccentual syllable is thus explained.

Tone and Inflection Feb 02 2020 Tone is about melody and meaning, inflection is about

grammar, and this book is about a bit of both. The contributions to this volume study possible and sometimes complex ways in which the tones of a language engage in the expression of grammatical categories. There is a widespread conception that tone is a lexical phenomenon only. This is partly a consequence of the main interest in tone coming from phonology, while the main interest in inflection has stemmed from segmental morphology. Similarly, textbooks on inflection and textbooks on tone give very few examples of the inflectional use of tone, and such examples are often the same ones or too similar. This volume aims to broaden our understanding of the link between tone and inflection by showing that there is more to tone than meets the eye. The book includes general chapters as well as case studies on lesser known languages of Asia, Africa and Papua New Guinea, with a special focus on the Oto-Manguean languages, a large and diverse linguistic stock of Mexico that inspired Kenneth

Pike's 1948 seminal work on tone. Most of the contributions to this volume provide first-hand data from recent fieldwork that stems from important language documentation activities. **Prosodic Typology II** Dec 02 2019 This text illustrates an approach to prosodic typology through descriptions of the intonation and the prosodic structure of 13 typologically different languages based on the same theoretical framework and the transcription system of prosody known as Tones and Break Indices (ToBI).

Experimental Studies in Word and Sentence

experimental studies of lexical tone and

intonation in a wide variety of languages. Six

papers deal with the discriminability or the

function of intonation contours and lexical tones

in specific languages, as established on the basis

of listener responses, as well as with brain

activation patterns resulting from the perception

of tonal and intonational stimuli. The remaining

eight papers report on detailed phonetic findings

on a variety of tonal phenomena in a number of

languages, including declination in tone languages, final lowering, consonant-tone interactions and pitch target alignment.

*Phonological Typology* Apr 29 2022 This book provides an overview of phonological typology: the study of how sounds are distributed across the languages of the world and why they display these distributions and patterns. It examines major phonological phenomena such as phoneme inventories, syllable structure, phonological alternations, stress, tone, intonation, and prosodic morphology, and investigates issues including how common certain types of sounds are cross-linguistically and why; how many languages differentiate questions and statements using intonation; which areas of the world tend to be associated with more complex tone distinctions; and the relationship between cross-linguistic and language-internal frequency. Data are drawn from existing typologies, from the results of a survey of various phonological patterns in the 100-language sample from the

World Atlas of Language Structures, and from corpora of individual languages. Matthew Gordon analyses these data and explores the correlations between different - often superficially unrelated - phonological properties to gain insight into the driving forces behind these phenomena. He provides an overview of synchronic and diachronic explanations for the patterns observed and discusses how formal phonological theory has attempted to model the typological data. One of relatively few typological works devoted to phonology, this book will be a valuable resource for phonologists and phoneticians from advanced undergraduate level upwards, as well all those with an interest in language typology.

**The Cambridge Handbook of Phonology** Oct 24 2021 Phonology - the study of how the sounds of speech are represented in our minds - is one

of the core areas of linguistic theory, and is central to the study of human language. This handbook brings together the world's leading experts in phonology to present the most comprehensive and detailed overview of the field. Focusing on research and the most influential theories, the authors discuss each of the central issues in phonological theory, explore a variety of empirical phenomena, and show how phonology interacts with other aspects of language such as syntax, morphology, phonetics, and language acquisition. Providing a one-stop guide to every aspect of this important field, *The Cambridge Handbook of Phonology* will serve as an invaluable source of readings for advanced undergraduate and graduate students, an informative overview for linguists and a useful starting point for anyone beginning phonological research.

*Discourse Intonation* Mar 17 2021 This textbook is an accessible introduction to discourse intonation for ESL/EFL instructors, whether practicing or in pre-service graduate programs. Because intonation is used to form impressions about a speaker's attitude, it is crucial that instructors understand the details of the underlying linguistic system so that they can help students avoid the more common intonation-related pitfalls they experience when communicating in an academic setting. This textbook relies heavily on the Brazil model; chapters are organized around different parts of that model and how they can be most effectively

taught. Readers will learn the conventions underlying, for example, how we group words in prosodic units, how we understand turn-taking cues in conversation, and how we assess whether someone is feeling angry or sad. This text features Check Your Learning sections, discussion questions, and hands-on activities at the end of every chapter. Chapters 3-9 also include a section on pedagogical implications. Some of the example sentences that illustrate intonation have accompanying short audio (MP3) files, which can be found online at [www.press.umich.edu/elt/compsite/DI](http://www.press.umich.edu/elt/compsite/DI).

**Typological Studies in Word and Sentence Prosody** Aug 02 2022 Despite the recent advances in the integration of lexical tone and intonation in phonological theory, all too often the study of intonation and the study of lexical tone are viewed as belonging to different research traditions. This collection strengthens the integrated approach by studying tone and intonation within a common framework, and by tracing their interaction in specific prosodic systems. Some papers deal with the structural properties of lexical tone and intonation, while others focus on the historical development of

prosodic systems. The volume also includes a re-evaluation of a classic paper on the typology of tone rules, and a survey of features signalling question intonation in African languages.

**Intonation and Meaning** Sep 10 2020 This

volume provides a guide to what we know about the interplay between prosody-stress, phrasing, and melody-and interpretation-felicity in discourse, inferences, and emphasis. Speakers can modulate the meaning and effects of their utterances by changing the location of stress or of pauses, and by choosing the melody of their sentences. Although these factors often do not change the literal meaning of what is said, linguists have in recent years found tools and models to describe these more elusive aspects of linguistic meaning. This volume provides a guide to what we know about the interplay between prosody-stress, phrasing, and melody-and interpretation-felicity in discourse, inferences, and emphasis. Daniel Buring presents the main phenomena involved, and introduces the details of current formal analyses of prosodic structure, relevant aspects of discourse structure, intonational meaning, and, most importantly, the relations between them. He explains and compares the most influential theories in these

areas, and outlines the questions that remain open for future research. This wide-ranging book involves aspects of phonetics, phonology, syntax, semantics, and pragmatics, and will be of interest to researchers and students in all of these fields, from advanced undergraduate level upwards.

*The Roles of Intonation in English Discourse* Jul 09 2020 This work is an attempt to construct a comprehensive theory of the functions of intonation. Whereas many linguists have contributed details of the forms of intonation and have dealt with various aspects of particular

functions of intonation, this study aims to bring all these together into a single, coherent description. Although the study is based on Halliday's model of intonation, it draws extensively on other linguists, particularly Pike, Jassem, O'Connor and Arnold, Crystal, Lehiste, Brazil, Brown, Cruttenden, Ladd and Liberman. The study is enhanced by detailed analysis of actual, recorded speech, and by a new departure in intonational analysis, namely the theory of the -stylistic potential- of intonation in different spoken genres."
